

## what is **lumière** light thérapie™?

Lumière Light Thérapie is the latest scientific advancement in anti-aging treatments to look younger and better without pain, discomfort, surgery or injections. Lumière Light Thérapie is the same procedure performed by leading dermatologists, delivered safely, effectively and without the need for additional licensure.

Lumière Light Thérapie combines light therapy with specially formulated topical skincare and dietary supplements. Lumière Light Thérapie helps to clear and soothe problematic skin, creates even skin tone and texture, purges and closes clogged pores, lightens age spots, sun spots and dark circles, diminishes crows feet and tightens thin, sagging skin to remove fine lines and reduce wrinkles.

Lumière Light Thérapie offers four uniquely different cosmetic treatments called Règimes. These Règimes use topical skincare products in combination with Lumière Light Thérapie to produce the desired results.

### régime options

- vitalizing régime** Intended for clients up to 22 years of age to prolong a youthful appearance and defend against environmental impact.
- repairing régime** Intended for clients over 22 years of age to purge and reduce pore size, even skin tone and texture, lighten age spots, sun spots and dark circles and reduce the appearance of "crows feet" around the eyes.
- firming régime** Intended for clients over 45 years of age to thicken and tighten thin skin associated with sagging and wrinkles.
- clearing régime** Intended for clients of all ages with problematic complexion to purge clogged, oversized pores, soothe and heal inflamed, irritated skin and balance complexion.

what it is

## changes in aging skin

There are two key factors that contribute to aging in the skin. As we age our metabolism slows down, resulting in a loss of cellular energy in the Fibroblast (cells that produce collagen and elastin). Our body's ability to produce the necessary nutrients (required by Fibroblasts) decrease as well. The result is a decrease in the production of collagen and elastin which is the support matrix that keeps the skin looking young, firm and tight.

## **lumière** light thérapie device

The Lumière Light Thérapie device was developed by the world's leading medical device manufacturer and recognized leader in the field of Light Emitting Diode - Photon Absorption Therapy. Photo Therapeutics Limited possesses years of clinical experience with FDA approval, significant intellectual property, and a portfolio of patents.

The Lumière Light Thérapie device deals with the first factor that contributes to aging in the skin - decreased cell energy in the Fibroblasts. When exposed to uniform light at precisely 633 nanometers, these cells readily absorb the light and get highly energized, as they once were before the slow down in metabolism.

The Lumière Light Thérapie device also increases cell membrane permeability allowing for deeper penetration of active ingredients and nutrients found in both Lumière Topical Skincare Session products and At-Home products.

## **lumière** light thérapie topical skincare

The Topical Skincare products for Lumière Light Thérapie have been developed through collaborative efforts of a team of leading dermatologists, photobiologists and cosmetic chemists. This is the first ever skin care line specially-formulated to work in combination with LED light therapy.

The Topical Skincare products deal with the second factor that contributes to aging in the skin - decrease in necessary nutrients for collagen and elastin production.

**session products** The Session Tri-Pack for Lumière Light Thérapie provides key nutrients to the energized Fibroblast cells for collagen and elastin production and active ingredients to produce immediate, primary results specific to the Règime selected.

**at-home products** The Daily Thérapie products for Lumière Light Thérapie are used at home to cleanse, balance and tone. These products also continue to feed vital nutrients and active ingredients, as well as defend against environmental impact to protect and prolong the Lumière Light Thérapie results.

how it works

## vitalizing règime

règimeoptions

Intended for clients up to 22 years of age to prolong their youthful appearance and defend against environmental impact.

Package	Number of Light Treatments	Number of Session Tri-Packs	At-Home Products
Starter	3	3	Daily Thérapie 30 Kit
Maintenance	12	12	Daily Thérapie 90 Kit

## repairing règime

Intended for clients over 22 years of age for reducing pore size, lightening age and sun spots, evening skin pigmentation and reducing the appearance of crows feet.

6 sessions in 30 days

a stand-alone, self-service treatment

**lumière** light thérapie as a stand-alone facial rejuvenation treatment

Client selects the best Règime for their condition and purchases a package. A Session Tri-Pack is provided before each session.

Client removes preparation product from Session Tri-Pack and washes face in washroom. Client then applies Session Treatment product to entire face and neck before Light Thérapie Session.

Client lies on facial table and pulls lamp head down and into position. Client pushes the start button on lamp head, and the device will start and complete a 20 minute session before shutting itself off.

Client applies Aftercare product from Session Tri-Pack. Client purchases a Daily Thérapie kit for 30 or 90 days, depending on the Règime purchased.

This unique, “self service” model allows you to receive professional skincare at considerable savings.

enhancing other facial services

**lumière** light thérapie combined with other facial rejuvenation treatments

facial procedure	specific benefits of lumière
<b>microdermabrasion</b>	Lumière Light Thérapie enhances the timing and degree of results related to skin tone and texture, inhibits pain and discomfort, and reduces bruising, erythema and areas of inflammation.
<b>chemical peels</b>	Lumière Light Thérapie enhances the timing and degree of results related to skin tone and texture, speeds recovery time while decreasing tenderness, improves skin density and counterbalances thinning of tissue.
<b>microcurrent</b>	Lumière Light Thérapie minimizes pore size as well as tightens skin tone and improves texture. As microcurrent works for muscle toning on the face, the combination treatment is highly effective and noticeable after just one treatment.
<b>botox &amp; injectable fillers</b>	Lumière Light Thérapie improves the longevity of results, and speeds recovery time while decreasing the bruising and inflammation caused by injectable fillers.
<b>IPL &amp; laser resurfacing</b>	Lumière Light Thérapie enhances the timing and degree of results related to skin tone and texture following resurfacing treatments. With this combination treatment, recovery time, erythema and areas of inflammation are reduced.
